

## Automated surveillance with Mindmancer School Guard

MINDMANCER HAVE TAKEN SURVEILLANCE TO A NEW LEVEL. OUR SYSTEMS ARE OPERATING DAY AND NIGHT, PROACTIVELY TRIGGER ON DANGEROUS SITUATIONS ONLY AND PREVENT VANDALISM, ARSON AND FIRES. IT CONNECTS INSTANTLY TO FIELD ASSISTANTS, JANITORS OR LOCAL GUARDIANS.

### A working solution to an urgent need

Arson prevention research shows that the great majority of malicious fires take place outside school hours with a peak at around 11pm. Most fires are started outside school buildings.

*"After introducing the Mindmancer School Guard service at 48 of our most challenging school buildings in the Stockholm area our annual costs for vandalism have been reduced dramatically. Already in the first three years of operations we saved over 1 million euro just in reduced graffiti and broken window panes."*

says Olle Åberg, Director at Skolfastigheter i Stockholm AB (SISAB) who owns and manage a total of 590 schools in the Swedish capital.

The Mindmancer School Guard cameras are connected to our software on a secure pc in your building. For your school certain dangerous patterns are identified, such as a group of persons staying too long too close to the building, and an alarm is generated. The monitoring centre receives the video alarm, confirms and follows the pre-defined alarm instruction. Either field assistants, local guardians, or your own janitors are dispatched to the building. Service can also be combined with online speakers or sirens. All actions and instructions are pre-defined by the school administration.

- ◆ DEVELOPED TO PROTECT SCHOOL BUILDINGS
- ◆ PREVENTS VANDALISM AND ARSON
- ◆ GUARANTEED AGAINST FALSE ALARMS
- ◆ COMPLIANT ON INTEGRITY PROTECTION
- ◆ NO CAPITAL INVESTMENT

Mindmancer AB was founded 2006 based on an invention for computerized video analysis at Chalmers University of Technology in Gothenburg, Sweden. Today the technology is used for automated surveillance in operations at over 350 detection points at schools, public buildings and other sites.

Actual security – for your sites, at your sites.
